Marketing AutoCAD is marketed under the motto "The world's leading 2D and 3D CAD system." Some online marketing of the software claims that it is "the most used 2D CAD software on the planet". Some experts disagree, however, citing that CAD software, like other computer applications, is only useful to those who need it. The AutoCAD version number indicates the year of release for both the 2D and 3D features. The number has been used as a marketing tool since the first version of AutoCAD: V19.0, which was released in the year 1983. Awards AutoCAD is generally credited as the world's best-selling CAD system. In the late 1990s and early 2000s, this position was challenged by MicroStation, but AutoCAD regained the crown in the mid-2000s. For example, in 2005 CAD magazine rated AutoCAD 2010 "Best Product of the Year". AutoCAD is also a five-time CAD magazine Readers' Choice Award winner, as well as a Product Innovation of the Year Award winner. History Origin The AutoCAD tradition begins in 1978 with the introduction of the LaserCAD program. LaserCAD, which was developed by Corian Computer Systems, Inc. was acquired by Autodesk in June 1989. In 1982, Autodesk released AutoCAD, which was a combination of LaserCAD and a new line of engineering tools called AutoLISP. Release history These release dates were determined by Autodesk using data from its internal Metrix market research system (the purpose of which is not publicly disclosed), and have been viewed by some as inaccurate. Feature development and version history For information on the evolution of each of AutoCAD's versions, see the Release History section of the AutoCAD online help. Autodesk discontinued development of AutoCAD 2007 in June 2007. The latest official release is AutoCAD 2010. Licensing The majority of the AutoCAD program and its source code is free of charge and available to anyone. Autodesk offers a number of other products under license for a fee. Autodesk provides a subscription-based product called AutoCAD 360 (formerly called AutoCAD Architecture), which allows users to access cloud-based CAD assets that can be used for free, as well as access to web-based programming and collaboration tools and features

XREF CAB file XREF format is an abbreviation for cross-reference, a type of file format used by CAD software. As of AutoCAD Crack For Windows 2004, XREF files contain reference information on objects or other XREF files. When you open a new drawing in a file with an existing XREF file, AutoCAD automatically updates the reference information. The XREF format was introduced in AutoCAD 2002. XREF files are also generated from the POINT, LINE, and SURFACE commands. XREF MAN file XREF MAN format is an abbreviation for cross-reference manager. XREF MAN files store a set of reference information to files other than XREF format. You can create XREF MAN files by using the POINT, LINE, and SURFACE commands. XML Documentation System XML Documentation System is a tool that lets you author and consume documents in XML format. It allows you to write documentation in a neutral markup language. It supports Unicode, and lets you write documents in English, Japanese, and Spanish. # Chapter 14 New Features in AutoCAD 2015 * * * # Note The information in this chapter applies to AutoCAD 2015. See the beginning of Chapter 15 for information about the upcoming release of AutoCAD 2016. * * * As in previous releases, the focus of the 2015 release is to provide the basic tools required by most architects and engineers, and to address the needs of more advanced users. The emphasis is on tools that are available and easy to use, but some new features are important for architects and engineers. New features include many that are beneficial for architects, as well as for engineers. For example, the ability to create a building model is quite helpful when you need to show your client a full-scale model of a house. In addition, the ability to import a PDF file is an important capability, as it makes it possible to take existing drawings from other sources, such as the Internet, and turn them into drawings in your AutoCAD file. * Layer Transparency is a feature that is

important for all architects, not just those who are using the structural features of the program. The ability to create a transparent layer allows you to see the underlying design on top of the layer, as well as to see what is underneath.

- * Section Display is a function that enables you to see the section of the design that is currently selected. Previously, this option was available for layers. a1d647c40b

What's New In AutoCAD?

Fusion 360: Fusion 360 is a cloud-based collaborative work-management tool that you use to make and share professional-quality 3D drawings. It's ideal for CAD professionals who want to make their designs accessible to others and integrate team feedback. It's also ideal for anyone who wants to make a prototype with CAD data. New features are available in 2019. **AutoCAD Extensions:** You can now extend your AutoCAD drawing with blocks that contain text, dimensions, and tables. Now you can add more data to your drawings and make them more engaging. **New Color Tab in Drawing Manager:** New colors and color tones are available from the Color tab in the Drawing Manager palette. You can view color names, color swatches, and create your own custom colors. **Rights Info:** Rights Info highlights image rights and software license information in your documents. You can now choose to display this information on an image's background. (video: 1:02 min.) **Feedback tool:** You can now comment on drawings from within the Feedback tool. You can either add a brief note, or you can tag images and more easily provide feedback on multiple images in a drawing. **Symbols, grids, and images:** You can now create and place symbols, grids, and images in your drawings with greater control. With the new Images command, you can place images and backgrounds, including a dynamic image tool that allows you to resize your images. **New Parameters Dialog:** A new Parameter dialog gives you greater control over your drawing. You can find more parameters, create macros to access them, and create dynamic parameters. **Tools: PowerPoint integration:** You can now import PowerPoint presentations into AutoCAD drawings as an image for all or selected layers. You can save your PowerPoint slides as an image and import them to AutoCAD. You can also use PowerPoint slides to create new drawing or template layers. **Find Autodesk Account:** You can now link your Autodesk Account to an individual Autodesk account. You can find Autodesk Account through Account Menu or through the File menu. You can also import your Autodesk Account login into your account when you sign in. **Simplified drawing geometry:** You can now navigate more quickly in your drawing by selecting geometry with the
