The Hobbit (2012 Motion Picture Soundtrack) Master Collection. Games like Candy Crush, Bejeweled, and 2048 have become enormously popular on smartphones and tablets, but the variety of game types has been limited. Cengiz proposed a new approach to game design called the “complete game,” which allows players to create, and enjoy, games that include a mixture of several game types in a single game. Cengiz and his colleagues carried out the research in collaboration with computer science professor Robin Milner and cognitive scientists David Steavenson and Robin Brook. The results are detailed in a paper entitled Completing Games: A Subdomain Richness Approach, published in the journal Games and Playable Media. “The complete game approach is not necessarily a revolution in game design — most games are already a mixture of different genres — but it does have the potential to open up new genres, including cooperative games,” Cengiz said. “Most of our games are actually made of many small games. Bejeweled is made of a few short games, for example. Our original game was also made of several small games. Once we understood the idea of a complete game, it felt natural to apply the same idea to small games. “When you play a complete game, the way in which you

approach the game subtly changes. Complete games encourage you to use your skills as opposed to following algorithms. This is similar to how babies play, where they need to learn and then apply what they've learned. We think that the complete game approach is very intuitive, because the idea is that you learn to play in the first phase, and only then you start playing." Complete games require people to relearn how to play games. "Players have to learn a variety of game-playing skills which allow them to complete games," he said. "The first phase of the complete game, where you first learn to play, is similar to how babies learn to play games. You learn how to solve problems by trial and error — this is similar to the trial-and-error approach to design that game designers use. "Then, as you learn how
