Common interfaces between Autodesk's products AutoCAD's API is focused on a very large audience of users. To this end, it is designed to be multi-lingual, as well as internationalized. It is designed for application development on a variety of platforms including Apple, Linux, and Microsoft Windows, among others. The AutoCAD API includes the following interfaces: Classes Shape Text Tools Support for Autodesk Exchange Apps Autodesk Exchange Apps, originally introduced in 2006, provide integrated application functionality for AutoCAD and other Autodesk tools. Users of the AutoCAD Architecture and AutoCAD Electrical apps can import, view, edit, create, and run their own AutoCAD drawings. These apps are licensed individually and can be used in any multi-user or single-user environment. The Exchange App.NET API was released in late 2007. Autodesk Exchange Apps are also available for the following AutoCAD languages: AutoCAD Architecture (architecture), AutoCAD Electrical (electrical) and AutoCAD Civil 3D (civil 3D). AutoCAD VBA Language (vba) is a Microsoft Visual Basic.NET-based object-oriented programming language that is integrated with Autodesk's object-oriented design languages, Visual LISP, and Visual Basic for Applications (VBA). AutoCAD VBA is the programming language used to create AutoCAD macros and Plugins that can be linked into AutoCAD drawings. AutoCAD's ObjectARX base class library is designed to be an environment in which the common characteristics of the various object types are defined. As a result, a development using AutoCAD can use the same objects for any of the AutoCAD applications. Subtypes, or "subapplets," are classes that provide additional functionality for any of the AutoCAD object types. Subtypes can be placed into the Global Application State (GAS) and can be updated through the same method used to update the GAS. AutoCAD's DXF files are based on the development platform DGN. More specifically, the invention relates to a method and apparatus for providing non-volatile data storage, wherein data is stored in a non-volatile fashion on a device that is connected to a host device in the form of a storage medium. Non-volatile data storage is widely used for storing data and programs that are not to be erased in the event of a power failure. Such non-volatile data storage is used in removable disk drives, smart cards, and flash memory devices such as compact flash or the like. Flash memory, which is used in smart cards and compact flash devices, is a non-volatile storage medium. The flash memory is composed of memory cells, each cell being capable of storing one or more bits of information. The storage capacity of a flash memory is not as large as that of a conventional EEPROM, DRAM, or magnetic disk drive. To increase the storage capacity of a flash memory device, the memory cells are made to be smaller. If the memory cells are made smaller, the number of memory cells that can be provided per unit area is reduced. For this reason, the memory cells must be more densely packed. The small memory cells are also vulnerable to changes in the surrounding temperature. For example,
